Full-stack software engineer with experience shipping scalable web and mobile apps to millions of users. Currently amplifying delivery with agentic AI development workflows and actively deepening expertise in AI systems and LLM integration.

EDUCATION

University of Washington, Paul G. Allen School of Computer Science and Engineering, Seattle, WA *Graduated June 2023*
Bachelor of Science in Computer Science

RELEVANT EXPERIENCE

Web and Mobile App Developer, Sporcle, Inc., Seattle, WA *Sept. 2023 – Present*

- Shipped hundreds of production features across web and mobile, designing and consuming REST APIs and SQL-backed services utilizing PHP, JavaScript, React Native, and Kotlin
- Spearheaded a major Android app modernization, resolving critical bugs, boosting performance, and refactoring legacy code to align with current Android and architectural best practices
- Owned features end-to-end from backend logic and data models to mobile and web clients, collaborating with product and design to deliver scalable solutions to millions of active users

Mobile Software Engineer, Able Opportunities, Inc. (Contract), Seattle, WA *Oct. 2025 – Present*

- Owned end-to-end development and deployment of a production React Native (Expo) mobile app as the sole engineer, from architecture and data layer through release
- Pioneered an agentic AI development workflow with Claude Code, codifying and continually evolving custom agent guidelines and processes as the tooling matures
- Engineered accessibility-first experiences for users with intellectual and developmental disabilities
- Refactored and standardized a legacy iOS (Swift) codebase and resolved critical bugs, improving readability, stability, and long-term maintainability across features

Software Engineer Intern, Akkompany, Remote *June 2022 – Sept. 2022*

- Developed in an AI-based Agile startup environment, directly alongside the co-founders
- Built a fully automated testing suite for an Electron application using Playwright and CircleCI, substantially decreasing testing, development, and deployment times
- Authored custom Node.js packages for profiling and logging CPU usage of long-running scripts, allowing integration of previously experimental features

ADDITIONAL EXPERIENCE

Computer Science Instructor, Juni Learning, Remote *Dec. 2021 – Oct. 2022*

- Concurrently mentored six high school students with a focus on data structures and algorithms
- Produced personalized lesson plans catered to student skill level and learning pace
- Debugged student code, providing guiding questions and constructive feedback

TECHNICAL SKILLS AND PROFICIENCIES

- **Programming Languages:** JavaScript, TypeScript, Python, Swift, Kotlin, Java, PHP, SQL, HTML/CSS
- **AI Engineering:** Agentic AI Development (Claude Code), AI Workflow Design, Context Engineering
- **Backend & Systems:** REST API design, Node.js, SQL data models, caching
- **Mobile & Frontend:** iOS, Android, React / React Native / Expo, Design Systems, Accessibility-First Design, End-to-End Mobile Delivery, Mobile/Web Architecture
- **Tools & Engineering Practices:** Git, Bash, CI/CD, Test-Driven Development, automated testing, performance optimization, logging/error handling
